

PITT Submission Checklist

Organized by readiness. Only items confirmed by repository evidence are marked ready.
Official requirements were checked 2026-07-20; see `SUBMISSION/DEVWEEK_REFERENCES.md` and re-check Devpost immediately before submission.

Ready

- **[X] Repository is public and accessible to judges.**
Confirmed at `https://github.com/seeker-cyber-maker/pitt-build-week`; collaborator workflow is recorded in `CONTROL/COLLABORATORS.md`.
- **[X] README describes the project scope and demo boundary.**
`README.md` states the single scenario, local-only data, and the driver-in-control constraint.
- **[X] Product scope document defines what is and is not built.**
`CONTROL/PRODUCT_SCOPE.md` lists the demonstrable story, required demo elements, and explicit exclusions.
- **[X] Local run instructions work.**
`npm test` runs Node.js scenario and contract tests. `python3 -m http.server 4173 --directory app` serves the demo. Both documented in `package.json`.
- **[X] Node.js tests pass.**
`npm test` — 23 tests across planning, day playback, fuel simulation, scenario, report-contract, and UI-contract coverage. Includes traffic-at-predicted-presence, price-event decisions, early close, and review-gated handoff behavior.
- **[X] Python AI/report tests pass.**
`python3 -m unittest discover -s tests/ai -p "test_*.py" -v` — 24 tests covering deterministic fallback for all three seeded inputs, provider error handling (HTTP error, connection error, timeout, malformed response, empty response), AI success path, configuration detection, secret masking, and report-result contract shape.
- **[X] Seeded demo scenario is documented.**
`DEMO_SCENARIO.md` states every fact with source references to `app/scenario.js` and canonical fixtures.
- **[] Under-three-minute video script is ready for recording.**
`SUBMISSION/VIDEO_SCRIPT.md` needs a final timing trim. Devpost requires a public YouTube video under three minutes with audio showing the project and covering Codex/GPT-5.6 use.

- **[X] Build log is seeded with confirmed milestones.**

`CODEX_BUILD_LOG.md` records milestones traceable to commit hashes and test evidence.

- **[X] Handoff records all changed paths and validation.**

`HANDOFFS/Research.md` lists every path created, validation performed, and open questions.

- **[X] Demo runs without login, API keys, or external dependencies.**

The app serves from `app/` with `python3 -m http.server`. No authentication, no database, no build step.

- **[X] Driver remains the decision-maker in every flow.**

The review toggle gates the report draft. The confirmation states no external action was taken.

- **[X] Every claim cross-checked against `CONTROL/PRODUCT_SCOPE.md`.**

No submission artifact claims live data, production safety, regulatory compliance, or real-time optimization.

- **[X] Commercial direction is documented separately from the POC.**

`CONTROL/PRODUCT_DIRECTION.md` records driver-companion, fleet-workflow, and customer-operated deployment hypotheses without presenting them as implemented capability.

Pending

- **[] Video recording.**

Script targets 2:30 (`SUBMISSION/VIDEO_SCRIPT.md`). Recording needs to be captured from a local browser session, uploaded publicly to YouTube, and checked for clear audio and a working-demo view.

- **[] Screenshots for submission.**

Screenshots of all three demo steps should be captured from a running instance. No screenshots exist in the repository yet.

- **[] Devpost project page.**

Submission is through <https://openai.devpost.com/>; deadline is July 21, 2026 at 5:00 PM PDT. Enter the project description, Work and Productivity track, public YouTube video, repository, and Codex `/feedback` session ID.

- **[X] Hosted demo URL is available.**

GitHub Pages is public at <https://seeker-cyber-maker.github.io/pitt-build-week/>. Before submission, perform one clean-browser smoke check against the current release.

- **[] Team member listing for submission form.**

Confirm required fields: name, role, email, GitHub handle. Known contributors: repository owner (integration), Patrick Simard (AI/report boundary).

- ☒ **Submission category or track.**

`Work and Productivity` fits the driver and fleet workflow focus.

- ☐ **Public-repository license.**

The repository is public, so add an appropriate license before submission or verify that Devpost accepts the public code under the repository's current terms. Private-repository sharing is not the selected path.

Blocked

- ☐ **AI-assisted report demo recording with a live provider.**

Blocked on a configured `PITT_AI_BASE_URL`, `PITT_AI_API_KEY`, and `PITT_AI_MODEL`. The deterministic fallback is fully functional and can be demonstrated without this.

Final Review (Before Submitting)

- ☐ Re-run `npm test` — confirm all tests pass.
- ☐ Re-run `python3 -m unittest discover -s tests/ai -p "test_*.py" -v` — confirm all tests pass.
- ☐ Run `git diff --check` — confirm no whitespace errors.
- ☐ Read every claim in the submission against `CONTROL/PRODUCT_SCOPE.md`.
- ☐ Confirm no secrets, keys, personal data, or screenshots with personal data in the repository.
- ☐ Confirm the demo runs from a clean clone with no external dependencies beyond Node.js and Python 3.
